Question 1

Boolean is a data type with only two value, "True" and "False".
Example:
9.9999 == 10
1 + 2 >= 0
not x == false

Question 2

A flowchart is a type of diagram that represent a process, consists of boxes connected by arrows.

Question 3

Nested conditionals is a conditional statement inside another conditional statement (woah inception!). Example:

```
if race == "protoss":
        if enemy == "zerg":
                strategy = "zealot rush"
        else:
                strategy = "fast expand"
elif race == "terran":
        if enemy == "zerg":
                strategy = "bio"
        else:
                strategy = "mech"
else:
        if enemy == "zerg"
                strategy = "all in"
        else:
                strategy = "macro"
```
